DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The prior art of the record fails to teach a two-phase excitation linear motor comprising two single coils forming one pole to continuously generate magnetic forces with a predetermined phase interval thereon, the magnetic forces linearly driving a moving body, wherein said two single coils are individually formed as an approximately rectangular ring-like shape where two sides of said rectangle opposing to each other function as a pair of effective conductors for contributing to generating a thrust force for the moving body of the linear motor, and the other two sides opposing to each other function as a pair of connecting conductors for connecting between said effective conductors pads close to ends of said effective conductors are bent at an approximately right angle with respect to a coil plane such that said pair of connecting conductors are offset from the coil plane, and extend in parallel with said coil plane where the coil plane is defined as a plane including individual centers of said pair of effective conductors, and the two single coils are integrated into one body such that one of the pair of effective conductors of one single coil is interposed between the pair of effective conductors of the other single coil while the individual single coils are combined such that the offset directions of the connecting conductors of the individual single coils are opposed to each other in a direction perpendicular to a traveling direction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
